Clinical Research at Scott & White

Study Title: KABI International Growth Study (KIGS)

Project ID#: 1466

Department: Pediatrics

Sponsor: Pharmacia/Upjohn, Inc.

Brief Synopsis of the Study

Condition(s):	Treatment(s):
Inadequate growth hormone secretion.	Growth hormone therapy-Genotropin

The purpose of this research study is to assess the long-term safety and growth response of children treated with Genotropin and to establish a data base suitable for the scientific investigation of questions that remain unanswered in this therapeutic area.

Who is eligible to participate in the study?

Age: Not Specified

Gender: M/F

All patients identified as having inadequate growth hormone secretion.

What may be involved/required for subject participation? (Visits, tests and/or logs, etc.)

There are no tests or procedures associated with this study that are not already a function of the normal clinical practice for patients receiving growth hormone therapy. The proposed length of your child's participation in this study is from the start of growth hormone therapy until the time in which your child reaches final adult height. The study will not require additional office visits or in any way increase the length of your child's therapy.
